PERSONAL STATEMENT

Full Stack Software Engineer with hands-on experience building web applications using React and REST APIs. Passionate about taking ownership, solving problems, and continuously learning through experience. Experienced working in Agile teams and contributing through testing, debugging, and code reviews to deliver reliable, user-focused software.

LIVE PROJECT

ROAMER MOBILE APP ↗

- Built Roamer, a location-based mobile application that helps runners discover new routes through GPS-powered exploration and gamified challenges.
- Owned end-to-end product delivery, from UI/UX design and full-stack development to integrating Mapbox APIs, real-time GPS tracking, testing, and deployment.

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER INTERN

HARMONEY | AUCKLAND 2025 – 2026

Tech Stack: TypeScript, React, Next.js, Nest JS, Docker, MySQL, Git, GitHub Projects

- Enabled administrators to search customers using legacy Salesforce customer numbers by integrating previously inaccessible customer data into the existing admin platform.
- Designed** and **implemented** role-based permissions aligned with internal approval workflows, enabling authorised users to manage sensitive actions such as loan cancellations at the final approval stage.
- Developed a mortgage declaration modal across multiple customer journeys, prompting users to provide missing mortgage information and improving data completeness during the loan application process.
- Collaborated** with developers, testers, and product owners through code reviews, testing, debugging, and stakeholder demonstrations to deliver features reliably into production.

SOFTWARE ENGINEER

Club Filipino Tauranga | 2025

Tech Stack: GitHub Actions · Docker · VPS · Linux · WSGI · Git

- Collaborated with a client and project team to deliver a web-based sports management platform through regular stakeholder meetings.
- Designed and implemented **CI/CD pipelines** using GitHub Actions to automate application deployment.
- Deployed** and **maintained** the application on a Namecheap VPS, configuring the Linux server and WSGI environment for production deployment.
- Monitored** application deployment and investigated logging and monitoring solutions to improve operational reliability.

EDUCATION/AWARDS

- MASTER OF SOFTWARE ENGINEERING**
Yoobee College, Auckland
(2024 – 2025)
- BACHELOR OF SCIENCE IN SOFTWARE CONVERGENCE**
Hongik University, Korea
2016 – 2022

HIGHLIGHTS

- 1ST PLACE WINNER, TRADE ME THINK-A-THON (SUMMER OF TECH)** ↗
Won first place pitching an AI-powered career guidance feature designed to enhance career exploration for Gen Z job seekers.
- BEYOND VISION - AI ACCESSIBILITY APP, AI HACKATHON** ↗
Built an AI-powered accessibility web app, helping visually impaired users understand visual content through contextual image descriptions and Māori language support.
